

Main Problems encountered;

Code perspective;

- 1) Testing was an issue this week as we were all busy with doing our work but unfortunately because of that, testing was neglected.
- 2) There was also some confusion when it came to understanding some of the parameters in the code. But, it turned out it was just because of the fact that those parameters corresponded to the database values.
- 3) To get the test coverage up, we also tried mirroring the equals method. This didn't end up working.
- 4) This was also the week we tried implementing the animations into the pages. This proved to a little difficult as I had to go back and change all of the buttons. This meant that the original root controller wasn't working as all the IDS/layout was changed.

Team perspective;

- 1) There were little to no issues this week when it came to the team perspective. Everyone had been assigned specific tasks in the beginning of the week and everyone stuck to it.

Adjustments for the next sprint

- 1) One thing that needs to be updated before the next sprint is the product backlog, and the schedule as we didn't do as much as we wanted to do this week.

Reflection;

- 1) Everything ran smoothly but as previously mentioned, not that much work could be done this week. We were running a little bit behind which means we have to readjust our plans.
